

Technidata UK Carbon Reduction Plan

1. Who are Technidata?

The Technidata Group develops and supplies software products and services that help improve both the quality of patient care and the competitiveness of the clinical laboratory. With a global workforce of around 170 employees, and regional offices across 4 continents, we aim to help customers maximise the potential of their own staff and laboratory equipment to support clinical decision-making.

2. Carbon reduction plan

Technidata develop software products which, for the main part, can be distributed and maintained electronically. We do not manufacture goods or use physical distribution mechanisms for our products and services.

Our carbon reduction plan therefore focuses on actions to manage operational efficiencies, such as company premises, business travel, vehicles, etc, while still providing working environments that meet regulatory requirements.

These actions include training staff to follow best practices.

Our actions are to:

1. Provide employees with energy-efficient hardware
2. Sensitise all employees to turn off lights and hardware when not in use
3. Provide office environments that are conducive to efficient heating/cooling (double glazing, window blinds, air conditioning)
4. Encourage the use of the free bus service to/from Technidata UK's premises to limit car journeys to the Head Office
5. Limit unnecessary journeys to customer sites, and encourage the use of public transport and car pooling when such journeys are unavoidable
6. Limit journeys by plane wherever feasible
7. Progressively replace company-funded vehicles powered by internal combustion engines by those with electric/hybrid motors
8. Incentivise the purchase of electric/hybrid vehicles by staff
9. Make EV charging facilities available at company locations

The Carbon Reduction Plan is kept under review by the General Manager, and is updated as part of Technidata UK's continual improvement policy.
