

TECHNIDATA announces the successful integration of the second phase of a unique laboratory information system for health institutions in the region of Quebec.

Montreal (Quebec), September 20, 2016

TECHNIDATA, the software supplier for clinical laboratories and biorepositories, announces the successful completion of the second phase of integration of a unique Laboratory Information System (LIS) for health institutions in the region of Quebec. This technological challenge aims to optimize, streamline and consolidate laboratory performance and is further proof of the company's expertise.

Group analyses together on a single software platform and harmonize laboratory operation

Health facilities in the Quebec City region have successfully completed the second phase of integration of their laboratories in May 2016.

The success of this extensive project is a significant milestone for TECHNIDATA in the establishment of a single technology infrastructure shared by the laboratories of the Quebec region. This shared infrastructure allows for better exchange of information between clinicians and health professionals, enhanced traceability of analyses and improved patient safety. By grouping analyses on a single analytical platform, this project is in line with Quebec's initiative to optimize performance of medical laboratories in the province.

For TECHNIDATA, this project was a major technological challenge, because it required the grouping together of five pathology services on a single server and a single database.

The harmonization of laboratory activities among institutions in the region have also allowed the TECHNIDATA laboratory information system to be integrated with Cristal-Net's "Electronic Health Record" (EHR) system. The Ministry of Health and Social Services has chosen this EHR system to be implemented on a provincial scale.

"Our solutions, which cover all laboratory disciplines, are perfectly suited to both complex multidisciplinary and multi-site organizations. Thanks to TECHNIDATA's expertise we have now begun the process of integrating the LIS of the Quebec Heart and Lung Institute with the newly-created infrastructure. This achievement will complete the integration project within the province of Quebec", concludes Claire Jolicoeur, General Director of TECHNIDATA Canada.

TECHNIDATA is a major player in the field of software for medical laboratories and biobanks in France. The company was established in the USA in 2005 and in 2009 in Canada with the creation of TECHNIDATA Canada in Montreal, the North American Regional Headquarters. More than 60 health institutions use TECHNIDATA solutions in North America, including Canada and Quebec.

About TECHNIDATA - www.technidata-web.com

With over 40 years' experience in the field of laboratory management, TECHNIDATA is a leading global software supplier for clinical, anatomic-pathology laboratories and biobank information systems. Developed in full compliance with the ISO 9001/ISO 13485 quality standards, TECHNIDATA software products are distributed in more than 25 countries worldwide and cover all the clinical laboratory disciplines: Biochemistry, Hematology, Immunology, Virology, Microbiology, Blood Banking, Histology/Cytology, Genetics, and Biobanking.
